Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claim 1, drawn to nucleic acids, classified in class 536, subclass 23.7.
 - II. Claims 2-5, drawn to methods of detecting bacteria, classified in class 435, subclass 6.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product of Invention I may be used in materially different processes, such as methods of making protein.

Sequence Election Requirement Applicable to Group I

3. It is noted that Group I reads on numerous patentably distinct molecules. The numerous SEQ ID NOS encompassed by claim 1 are patentably distinct by virtue of having different structures and being useful in different methods. Specifically, each SEQ ID NO is useful in the specific detection of a different species or strain of microorganism. A reference against one molecule would not be a reference against another, and, in view of this and the multitude of sequences submitted for examination by the USPTO, a search of more than one distinct molecule would pose a serious burden. Accordingly, a further restriction is applied to Group I. Applicant must further elect a single SEQ ID NO if this Group is elected.

This is not an election of species. Applicant is advised that examination will be restricted to only the elected SEQ ID NO.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, and because Inventions I-II require different searches that are not co-extensive, examination of these distinct inventions would pose a serious burden on the examiner and therefore restriction for examination purposes as indicated is proper.
5. A fully responsive reply will comprise the election of a Group and, if Group I is elected, the election of a particular sequence to be examined.
6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
